Configuration and Change Management Report

1. Purpose

This document explains how the configuration and change management handled.

2. Configuration and Change Management Specifications

Due to time constraints we made the role sharing as independent as we could to avoid some problems that caused from developing on same code. Even so there will be some parts that coded as team in this project. We (actually GitHub) will take care of these potential difficulties.

This document will be more descriptive and have a rich content when the development process goes a little further.
